SUPPLY CHAIN MANAGEMENT -1.

Question type: Subjective

Marks: 5

Explain the role of e-business in Supply Chain Management.

Maximum Characters:385

The impact of e-business in supply chain management (SCM) has gained significant interest in researchers and academics in recent years since e-business and SCM are critical success factors. E-business has enhanced both supply chain efficiency and responsiveness by sharing real-time information regarding inventory, production scheduling, customer orders and delivery status

374 of 385 characters (97%)

Question type: Subjective

Marks: 5

List out some of the major benefits of IT in a supply chain.

Maximum Characters:385

0 of 385 characters (0%)

Question type: Subjective

Marks: 5

Explain the role of sub-contracting in Capacity Management (Production and operation department).

Maximum Characters:385

When subcontracting operations or activities are used, they affect all stages of operations, from the definition of the operations that are required in production, costing, forecasting, planning, and scheduling, to the management of logistics for materials, semi-finished products, and finished goods. Finally, these resources require their own processes for accounting and cost control

Question type: Subjective

What are the supply chain management issues and challenges in India?

Maximum

The supply chain in India suffers from both demand side challenges and supply side challenges. Demand side supply chain challenges in India are basically related to price and variety. India is a country full of diversity. Information availability. Necessary information such as POS data, production capacity and lead time is not available. Infrastructure Limitations. Lack of Intellectual Property.

SUPPLY CHAIN MANAGEMENT -1.

Question type: Subjective

Marks: 5

Explain the term Defect Per million opportunities (DPMO)

Maximum Characters:385

Defects per million opportunities (DPMO) is the average number of defects per unit observed during an average production run divided by the number of opportunities to make a defect on the product under study during that run normalized to one million.

Defects Per Million Opportunities. Synonymous with PPM.

To convert DPU to DPMO, the calculation step is actually $DPU/(\text{opportunities})$
